

## Picture of the Month

Nirav Shastri, MD

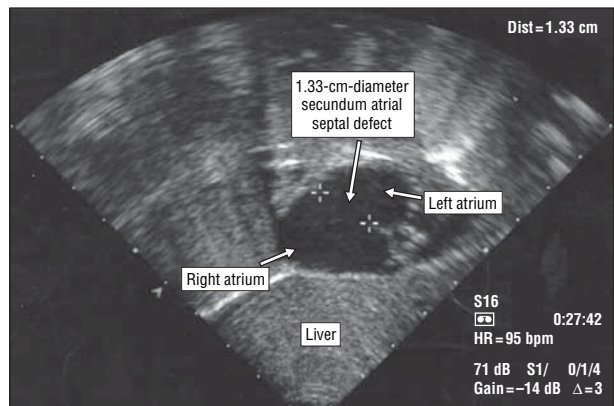

**A** TERM BABY WAS BORN BY SPONTANEOUS vaginal delivery to a gravida 5, para 5 mother. His Apgar score was 7 after 1 minute. At 5 minutes, the score was 8 because of the presence of acrocyanosis and low heart rate. He was appropriate for gestational

age with a birth weight of 3417 g, length of 51.7 cm, and head circumference of 35.5 cm. On examination, there was a bifid thumb with duplication of the distal phalanx on the right hand (**Figure 1**). On auscultation, an ejection systolic murmur grade 2/6 on the left sternal border was heard. Electrocardiography showed bradycardia with a heart rate of 93 beats/min. Echocardiography revealed a secundum atrial septal defect measuring 1.33 cm (**Figure 2**). There was no family history of any limb or heart defects.

**Author Affiliation:** Department of Pediatrics, University of Kansas Medical Center, Kansas City.

**Figure 1.** Bifid thumb on right hand.

**Figure 2.** Echocardiogram (subcostal view) showing the atrial septal defect. HR indicates heart rate.
